JOB RECRUITMENT PORTAL

ACADEMIC TEAM PROJECT – 2026–2027

SASI INSTITUTE OF TECHNOLOGY AND ENGINEERING
Department of Information Technology

---

1. PROJECT DETAILS

Project Title: Job Recruitment Portal

Project Description:

The Job Recruitment Portal is a web-based application designed to connect job seekers and recruiters through a single platform. Candidates can register, search for job opportunities, view job details, and apply for suitable positions. Recruiters can post job vacancies, manage job details, view candidate applications, and update application statuses.

2. OBJECTIVES OF THE PROJECT

- To provide an online platform for job seekers and recruiters.
- To make job searching and application processes easier.
- To allow recruiters to manage job postings.
- To maintain candidate and application details.
- To reduce manual work in the recruitment process.

3. TEAM MEMBERS

S. No.	Name	Roll Number
1	S.Y.D.Surendra Reddy	24K61A1299
2	R.Rajasekhar	24K61A1298
3	S.Lavanya	24K61A12A0
4	S.P.N.Sandhya Siri Sree	24K61A12A1

4. TECHNOLOGIES USED

1. HTML
2. CSS
3. JavaScript
4. React JS
5. React Router
6. JSON Server

1. INTRODUCTION

The Job Recruitment Portal is a web-based application designed to simplify and streamline the recruitment process by connecting job seekers and recruiters through a single platform. It provides an efficient and organized environment for managing job opportunities and recruitment activities.

The system enables candidates to register, search for available job opportunities, view job details, and submit applications. It also allows recruiters to publish job vacancies, manage job postings, review applications, and update candidate application statuses.

By bringing these functionalities together, the portal reduces the complexity of traditional recruitment methods and improves communication between candidates and recruiters. The application is developed using React JS to provide a responsive, interactive, and user-friendly interface.

2. PURPOSE OF THE PROJECT

The purpose of the Job Recruitment Portal is to simplify the job search and recruitment process by providing a single platform for candidates and recruiters. It helps candidates find and apply for suitable jobs while allowing recruiters to manage job postings and applications efficiently. The system reduces manual effort and makes the recruitment process faster and more organized.

3. OVERVIEW OF THE SYSTEM

The Job Recruitment Portal consists of two main modules: Candidate and Recruiter. Candidates can register, log in, search for job opportunities, view job details, apply for jobs, and track their application status. Recruiters can log in, add new job vacancies, update or delete existing job postings, and manage applications received from candidates.

The system uses React JS for the user interface and JSON Server for data management. It provides an organized platform for handling job postings and recruitment activities efficiently.

4. MAIN USERS OF THE SYSTEM

4.1 Candidates

Candidates are the users who search and apply for job opportunities through the portal. They can perform the following activities:

- Search for jobs using job title and location.
- Filter jobs based on experience and other available criteria.
- View complete job descriptions and required skills.
- Register and maintain their profile information.
- Apply for suitable job opportunities.
- View their submitted applications and application status.

4.2 Recruiters

Recruiters are responsible for managing job postings and reviewing applications. They can perform the following activities:

- Log in to the recruiter section.
- Add new job vacancies.
- Edit existing job details.
- Delete job postings.
- View jobs posted by them.
- View applications received for each job.
- Update application status as Applied, Shortlisted, or Rejected.

5. TECHNOLOGIES USED

The project uses the following technologies:

- **React JS:** Used to develop the user interface using reusable components.
- **React Router:** Used for navigation between application pages.
- **JavaScript:** Used to implement application logic and user interactions.
- **HTML and CSS:** Used to structure and style the web pages.
- **JSON Server:** Used as a simple backend to store and manage data.
- **Fetch API / Axios:** Used to communicate with the backend through HTTP requests.
- **Context API:** Used to manage authentication information and user roles.

6. SYSTEM PAGES AND THEIR FUNCTIONALITIES

The Job Recruitment Portal consists of several pages designed to support candidate and recruiter activities. Each page performs specific functions to ensure smooth navigation and efficient recruitment management.

6.1 Home Page

The Home Page serves as the main entry point of the application. It provides a job search facility and displays the latest job opportunities available on the portal.

6.2 Jobs Page

The Jobs Page displays the available job listings. It allows candidates to search and filter jobs based on relevant criteria such as job title, location, and experience.

6.3 Job Details Page

The Job Details Page provides complete information about a selected job, including its description and requirements. It also allows candidates to apply for the selected position.

6.4 Login and Registration Pages

These pages allow users to access the portal according to their roles. Candidates can register and log in to explore job opportunities, while recruiters can log in to manage recruitment activities.

6.5 Candidate Pages

Candidate-related pages allow users to access their profile information and view their submitted job applications. Candidates can also track the status of their applications.

6.6 Recruiter Dashboard

The Recruiter Dashboard provides an overview of the recruiter's job postings and recruitment activities. It allows recruiters to add new jobs, edit existing postings, delete jobs, and view applicants.

6.7 Job Application Management Page

This page displays the candidates who have applied for a particular job. Recruiters can review applications and update candidate statuses, such as Applied, Shortlisted, or Rejected.

7. KEY FEATURES OF THE PROJECT

7.1 Job Search and Filtering

Candidates can search for available jobs using job title, location, and experience. This feature helps users find relevant job opportunities without checking every job posting individually.

7.2 Job Details

The portal provides detailed information about each job, including company name, location, experience requirements, salary, job type, description, and required skills.

7.3 Candidate Registration and Profile Management

Candidates can register on the portal and maintain their personal and professional details. Their profile includes information such as name, email, experience, skills, and resume link.

7.4 Job Application Management

Candidates can apply for suitable jobs through the application process. The system checks whether the candidate has already applied for the same job to avoid duplicate applications.

7.5 Recruiter Dashboard

The recruiter dashboard provides a centralized place to manage job postings. Recruiters can view their jobs, add new vacancies, edit existing details, and delete unwanted postings.

7.6 Application Status Management

Recruiters can view the applications received for their job postings and update the status of each application. The available statuses include Applied, Shortlisted, and Rejected. Candidates can view the status of their submitted applications.

8. Components and Pages Used in the Project

The Job Recruitment Portal is structured using reusable React components and dedicated pages to ensure modularity, maintainability, and efficient functionality. The application is divided into three main categories: Recruiter Module, Candidate Module, and Common Module.

8.1 RECRUITER MODULE

The Recruiter Module provides functionalities that enable recruiters to manage job postings and candidate applications.

8.1.1 Recruiter Pages

1. **RecruiterDashboard.jsx** – Displays an overview of recruiter activities and job-related information.
2. **ManageJobs.jsx** – Provides options to view and manage existing job postings.
3. **AddJob.jsx** – Allows recruiters to create and publish new job vacancies.
4. **EditJob.jsx** – Enables recruiters to modify the details of existing job postings.
5. **Applications.jsx** – Displays applications received for job postings and supports application management.

8.1.2 Recruiter Components

1. **JobForm.jsx** – Provides a reusable form for entering and updating job details.
2. **ApplicantsTable.jsx** – Displays the details of candidates who have applied for jobs.
3. **RecruiterJobTable.jsx** – Presents recruiter job postings in a structured tabular format.
4. **StatusCard.jsx** – Displays application-related status information.
5. **StatusDropdown.jsx** – Allows recruiters to select and update application statuses.
6. **ConfirmDialog.jsx** – Displays confirmation messages before performing actions such as deleting a job posting.

8.2 CANDIDATE MODULE

The Candidate Module provides functionalities that help job seekers explore job opportunities, submit applications, and track their application progress.

8.2.1 Candidate Pages

1. **MyApplications.jsx** – Displays the jobs applied for by the candidate along with their application statuses.
2. **CandidateRegister.jsx** – Provides a registration interface for new candidates to create an account.

8.2.2 Candidate Components and Sub-Features

1. **Candidate Application Form** – Allows candidates to submit their applications for selected job opportunities by providing the required information.

8.3 COMMON MODULE

The Common Module contains shared pages and reusable components that support navigation and functionality across the application.

8.3.1 Common Pages

1. **Home.jsx** – Serves as the main landing page and provides access to the portal's primary features.

2. **Jobs.jsx** – Displays available job opportunities and provides job search functionality. (`/jobs`)
3. **JobDetails.jsx** – Displays detailed information about a selected job. (`/jobs/:jobId`)
4. **Login.jsx** – Provides the login interface for users to access the portal. (`/login`)

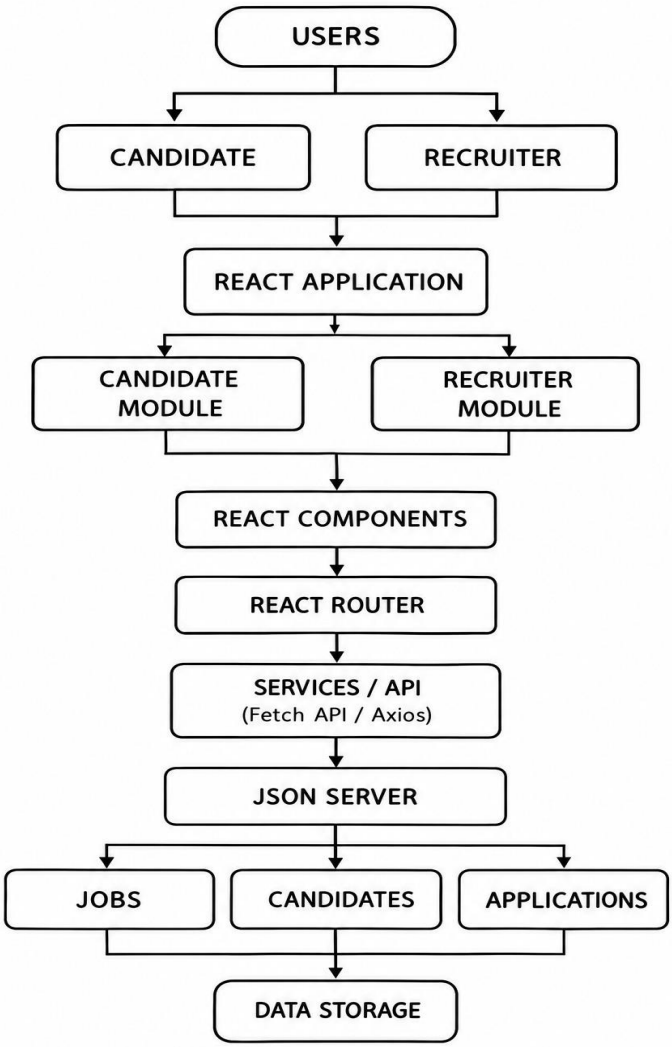

8.3.2 Common Components

1. **Navbar.jsx** – Provides navigation links to different sections of the application.
2. **Footer.jsx** – Displays common footer information across the application.
3. **JobCard.jsx** – Displays individual job information in a reusable card format.
4. **ProtectedRoute.jsx** – Controls access to restricted routes based on authentication and user permissions.

9. ARCHITECTURE OF THE JOB RECRUITMENT PORTAL

1. SYSTEM ARCHITECTURE

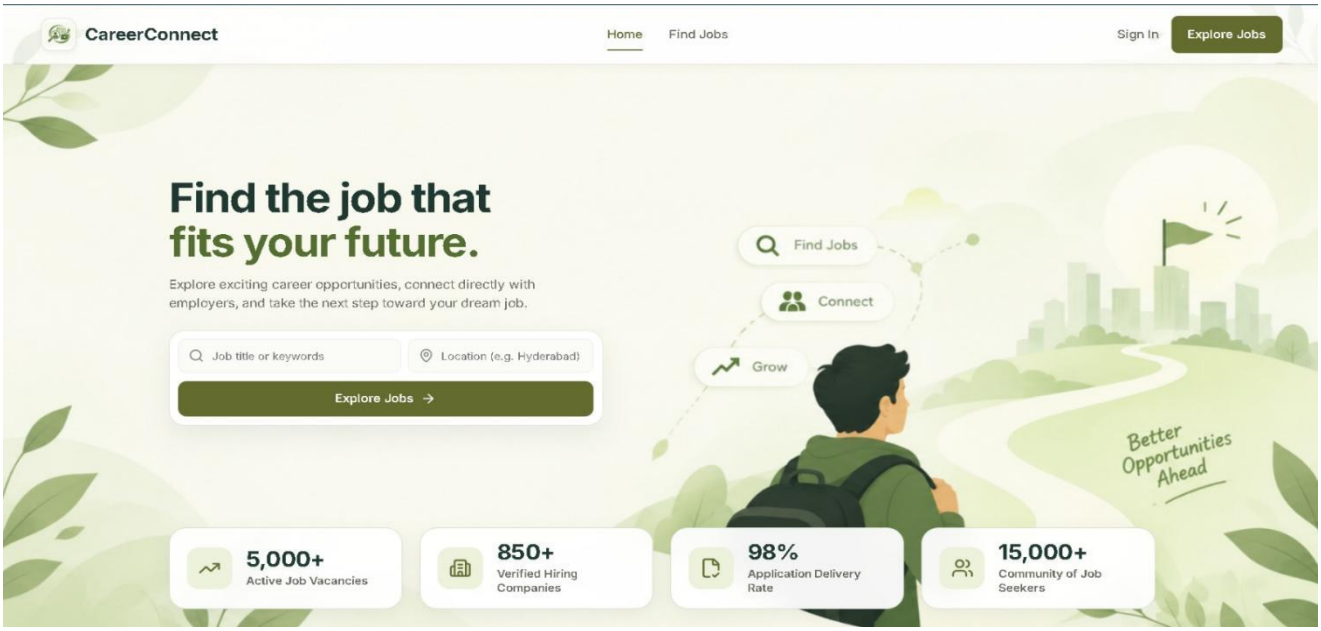

The Job Recruitment Portal follows a component-based architecture using React JS for the frontend and JSON Server for backend data management.

10. EXPLANATION OF PROJECT SCREENSHOTS

The following explanation is based on the 12 pages in your uploaded Job Recruitment Portal – Screens PDF. It describes each screenshot in a formal project-report format.

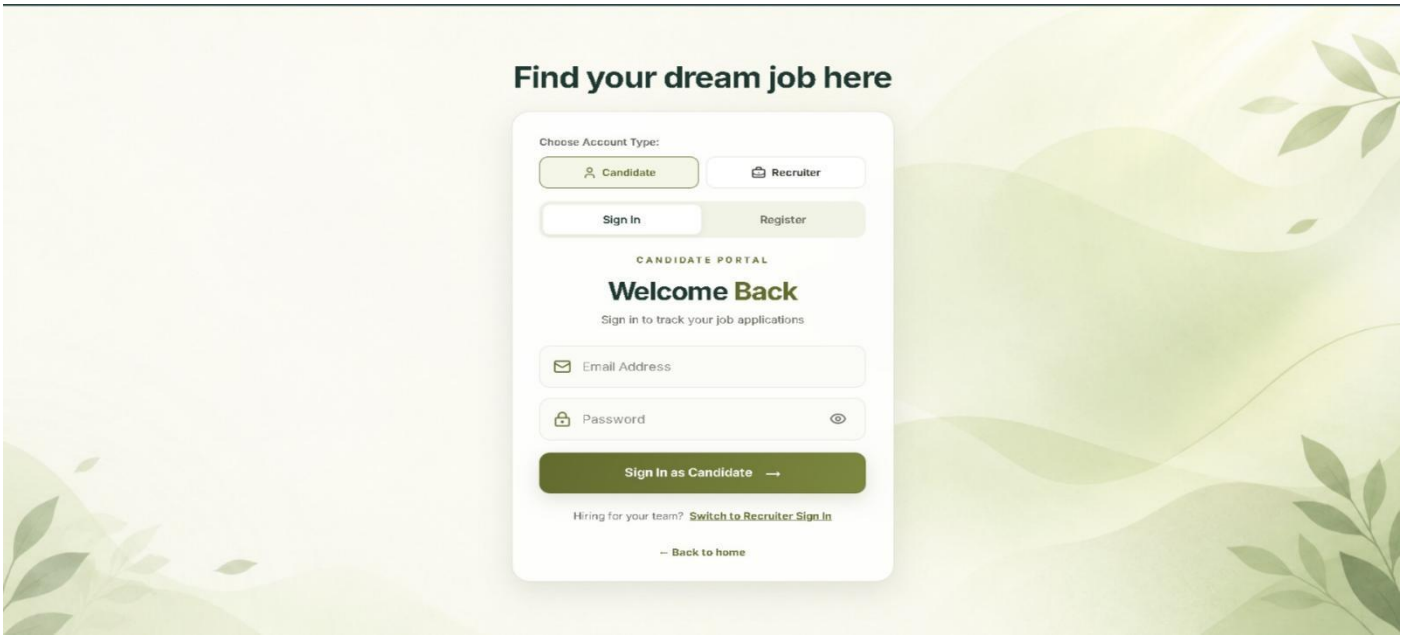

10.1 HOME PAGE

The Home Page is the main entry point of the Job Recruitment Portal. It includes navigation links, a job search section for title, location, and experience, and a Latest Jobs section displaying job details such as company, salary, and experience requirements with a View Details option.

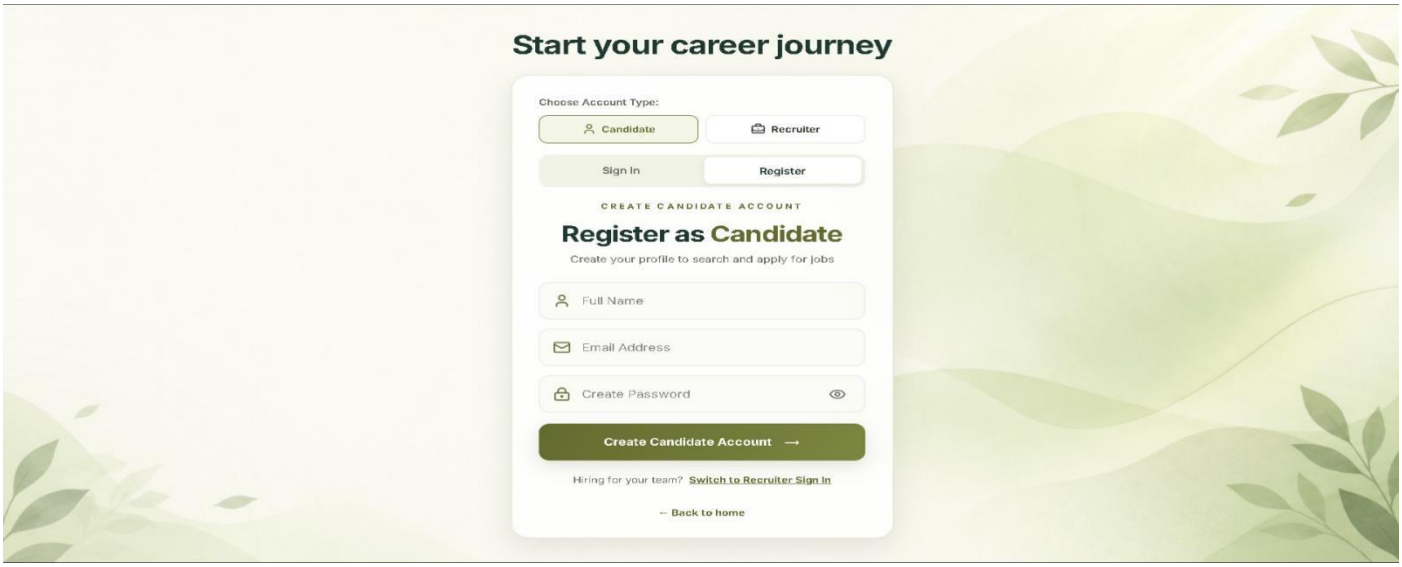

Main purpose: To help users quickly search for available job opportunities.

10.2 LOGIN PAGE

The Login Page allows registered candidates and recruiters to securely access the Job Recruitment Portal using their registered email address and password. It provides two input fields, Email and Password, where users must enter their login credentials to authenticate themselves. After successful login, users are redirected to their respective dashboards based on their roles, where they can access the available portal features. The page also includes a Create an Account link for new users to register and access the portal.

10.3 REGISTRATION PAGE

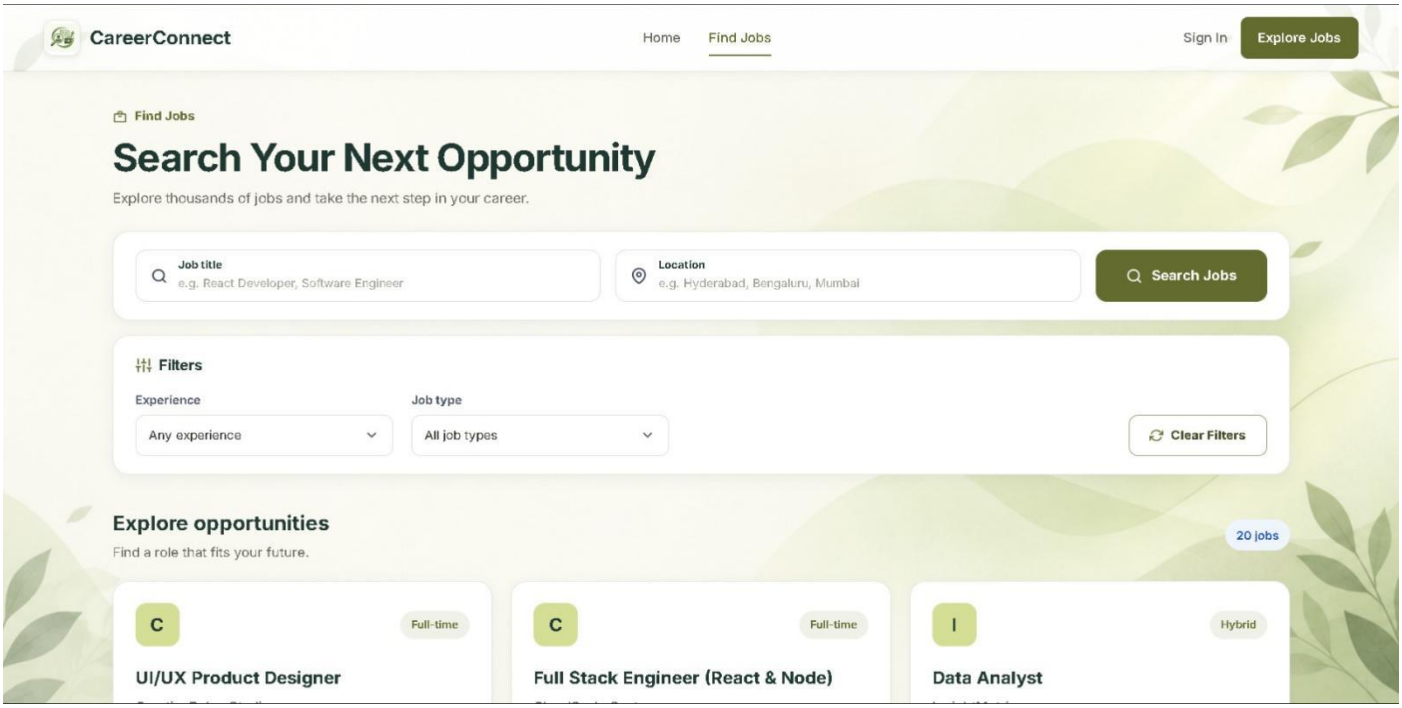

The Registration Page allows new users to create an account on the portal. It contains fields for Name, Email, Password, and Role.

The Role field allows users to select whether they want to register as a Candidate or Recruiter. After entering the required information, users can click the Create Account button.

Main purpose: To register new users and identify their roles in the system.

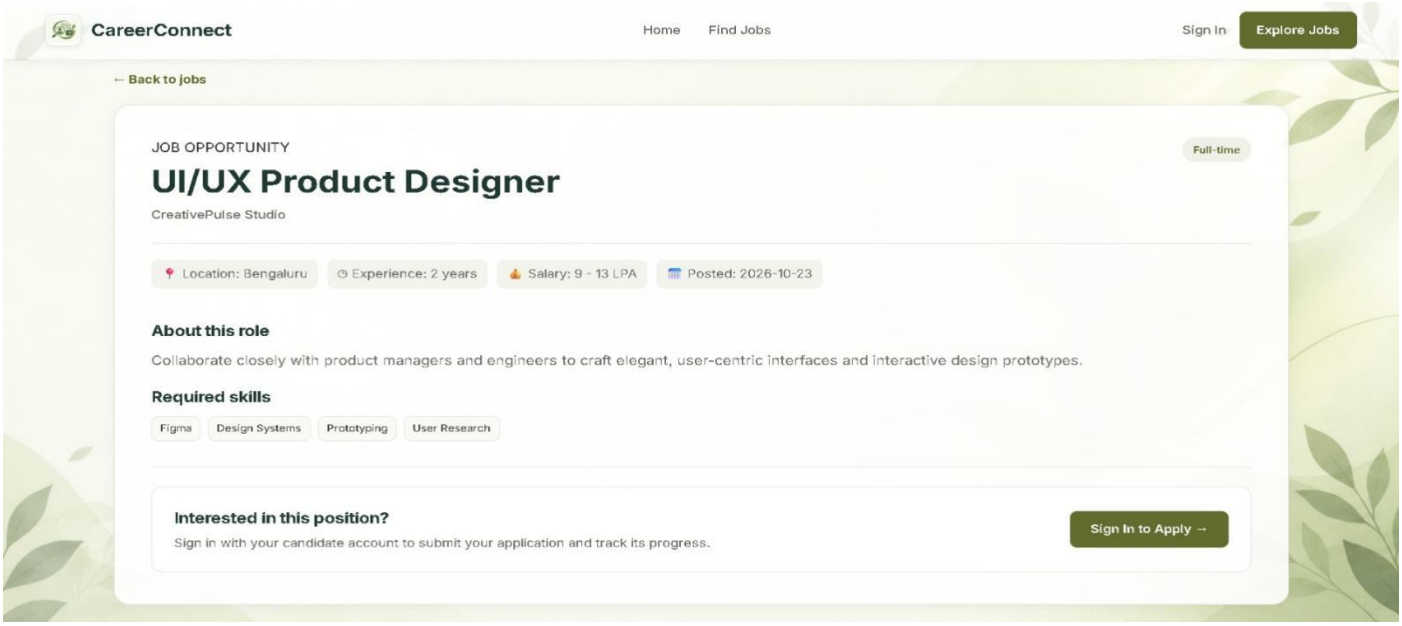

10.4 JOBS PAGE

The Jobs Page displays available job vacancies and helps candidates find suitable opportunities using filters such as experience and job type. Each listing shows the job title, company, location, experience, salary, and View Details option. Pagination allows users to navigate through multiple job listings.

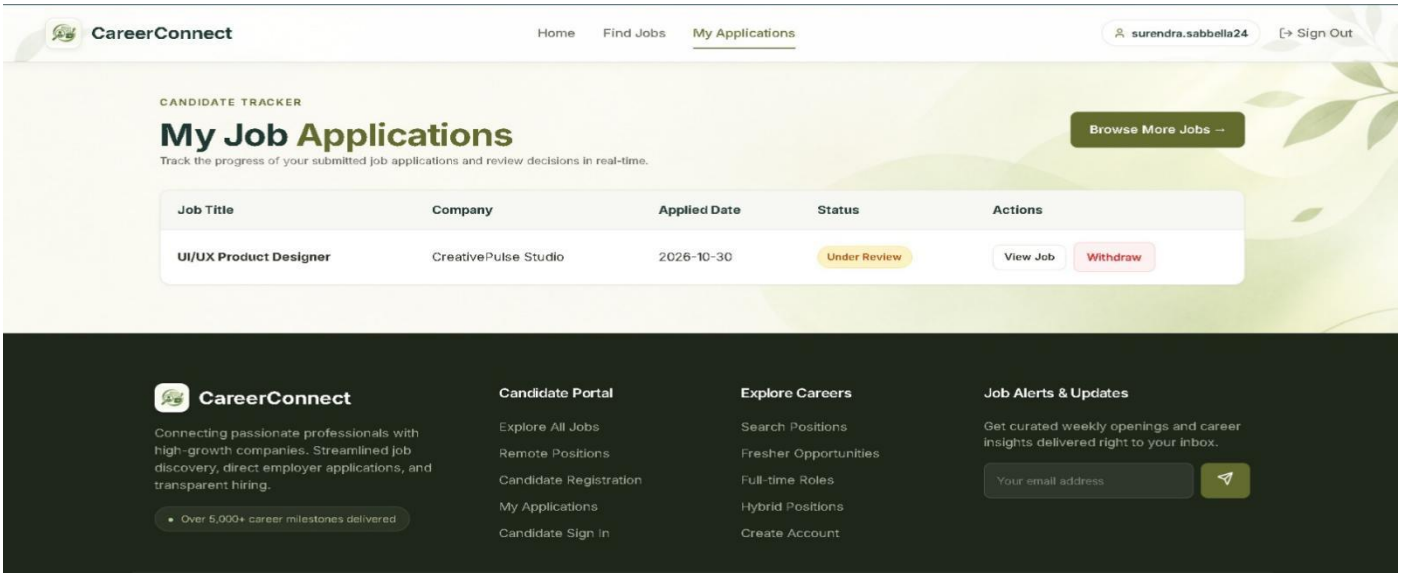

Main purpose: To display job opportunities and allow candidates to search and filter available jobs.

10.5 JOB DETAILS PAGE

The Job Details Page displays complete information about a selected job, including the job title, company name, location, experience requirements, salary, job type, required skills, and job description. It provides an Apply Now option that allows candidates to apply for the selected job. When clicked, an application form appears with fields to enter the resume link and cover note. Candidates can submit their applications using the Submit Application button or cancel the process using the Cancel button. The main purpose of this page is to provide detailed job information and allow candidates to easily apply for suitable job opportunities.

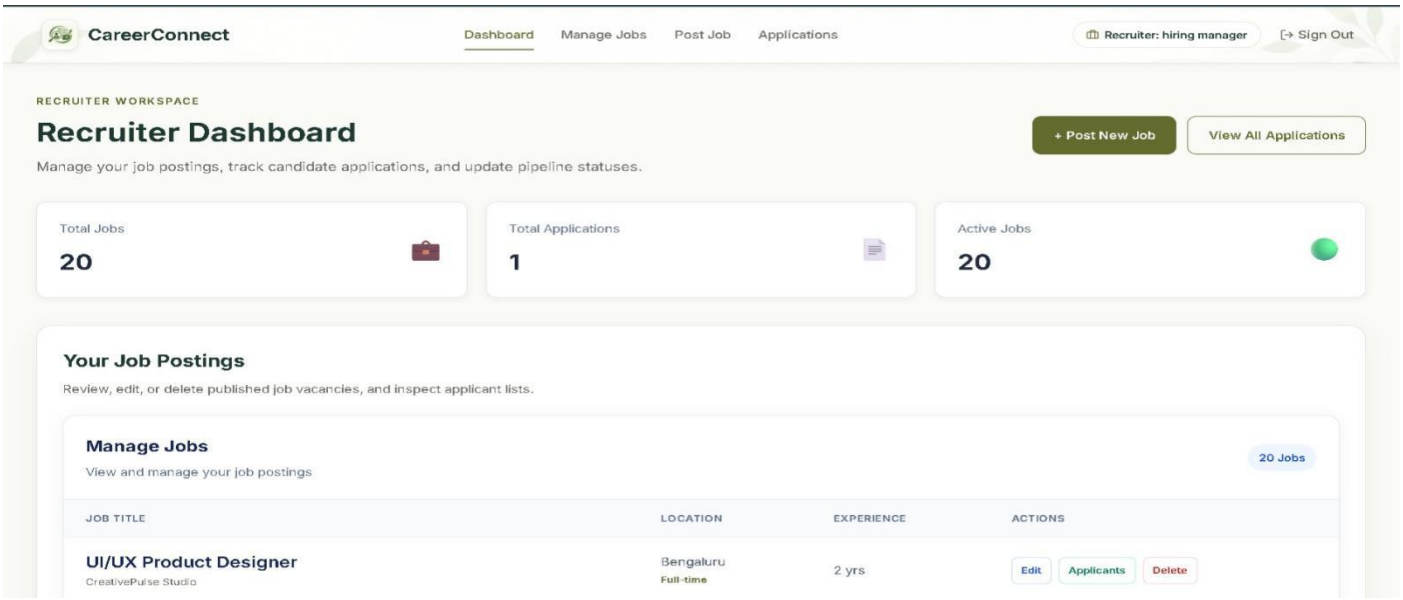

10.6 MY APPLICATIONS PAGE

The My Applications Page displays jobs applied for by a candidate, including the job title, company name, applied date, and application status. The available statuses are Applied, Shortlisted, and Rejected, helping candidates track their application progress.

Main purpose: To allow candidates to view and track the status of their submitted job applications.

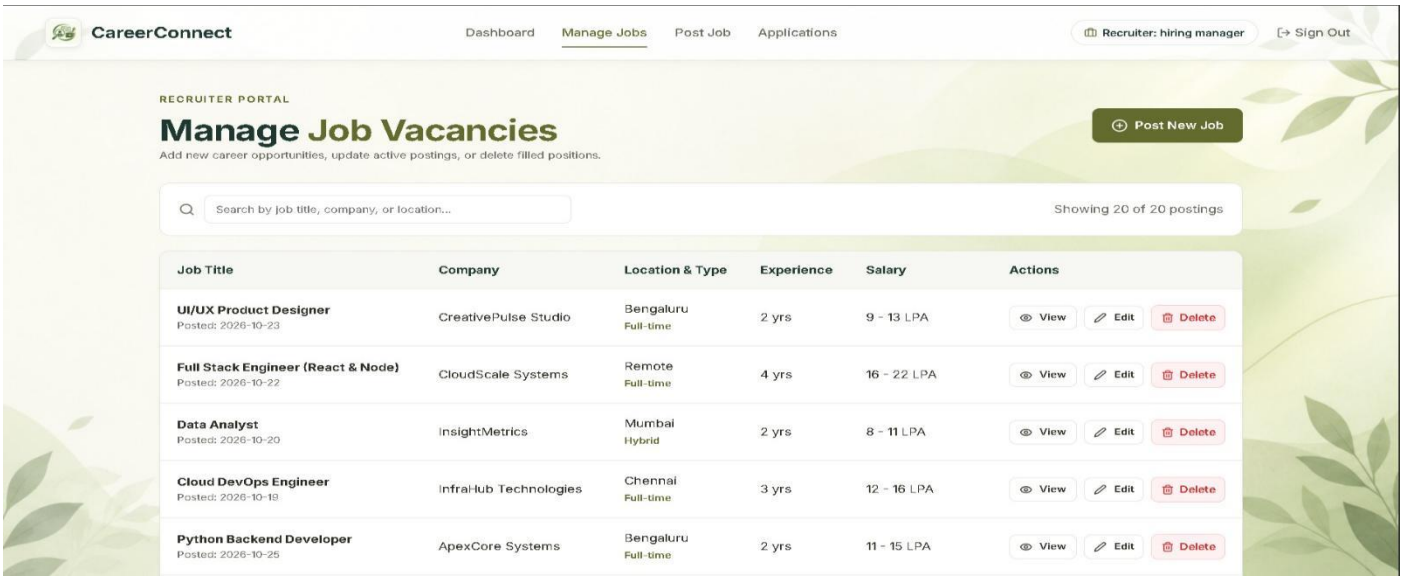

10.7 RECRUITER DASHBOARD

The Recruiter Dashboard helps recruiters manage job postings and monitor applications. It displays Total Jobs and Total Applications, along with a list of job details. Recruiters can add, edit, and delete job postings and view applicants for each job.

Main purpose: To provide recruiters with a centralized interface for managing job vacancies and applications.

10.8 ADD / EDIT JOB PAGE

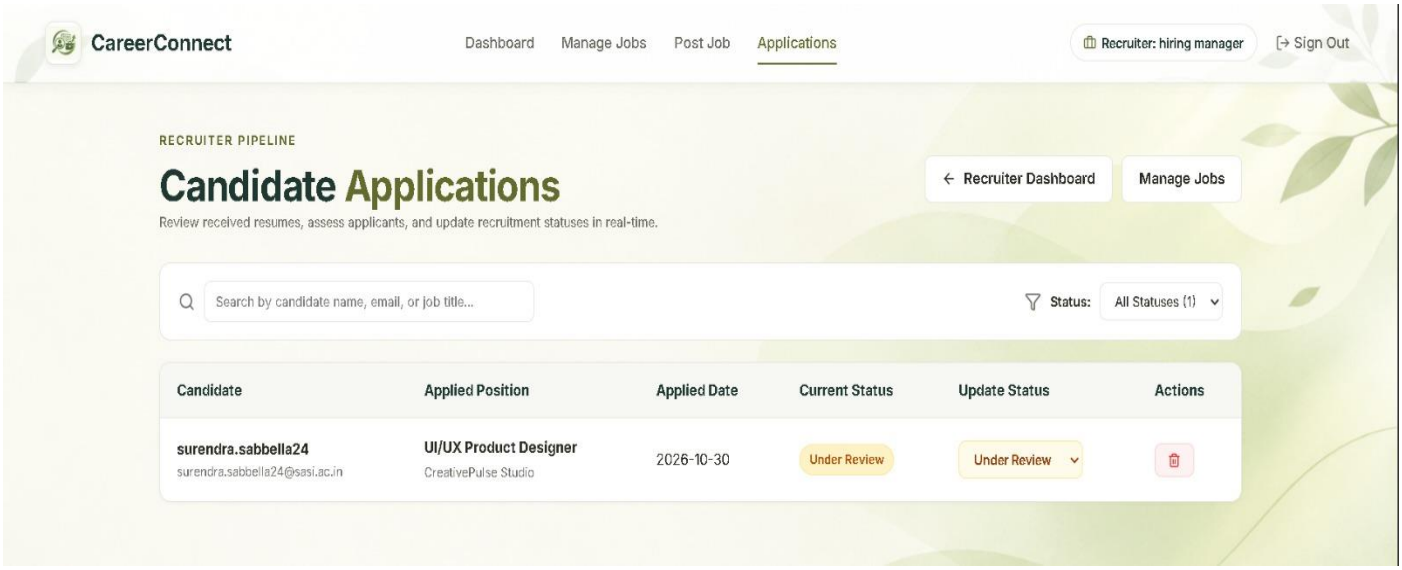

It contains fields such as Title, Company, Location, Job Type, Minimum Experience, Maximum Experience, Salary, Skills, and Description.

After entering the required information, the recruiter can click the Save Job button to save the job details. The Cancel button allows the recruiter to cancel the operation.

The same form is reused for both adding a new job and editing an existing job.

Main purpose: To manage job information and maintain updated job vacancies in the portal.

10.9 APPLICANTS PAGE

The Applicants Page displays candidates who have applied for a job, including their names, experience, resume links, and application status. Recruiters can review candidate details and update statuses to Applied, Shortlisted, or Rejected, helping manage the selection process.

CONCLUSION

The Job Recruitment Portal successfully delivers an integrated web-based platform that simplifies and streamlines the recruitment process for both candidates and recruiters. The project achieves its primary objective by providing separate modules for candidates and recruiters, ensuring that each user can access the functionalities relevant to their role.

The key project outcomes include successful implementation of candidate registration and login, job searching, detailed job information display, and online job application submission. On the recruiter side, the system enables job creation, updating, deletion, viewing candidate applications, and managing application statuses. It also establishes effective communication between the React frontend and JSON Server backend through API integration and supports structured data management for jobs, candidates, and applications.

Through the implementation of React JS, React Router, reusable components, and CRUD operations, the project demonstrates the development of a modular, interactive, and maintainable web application. It also provides practical experience in frontend development, routing, form handling, API integration, and backend data management.

Overall, the completed project provides a functional foundation for an efficient recruitment system by reducing manual effort, organizing recruitment activities, and improving interaction between candidates and recruiters. It can be further enhanced with advanced search filters, real-time notifications, secure authentication, and additional recruitment management features.
